Back to the terminal_

Wwhere GitHub Copilot CLI meets the Power Platform

Arjan Rijsdijk_

Power Platform @ Powerbouwer
DevOps Engineer @ Schiphol
Business Applications MVP

in/arjanrijsdijk

Agenda_

01. Back to School
02. GitHub Copilot CLI
03. Getting Started
04. Slash Commands
05. Basics
06. Plugins
07. Power Platform

back to the terminal

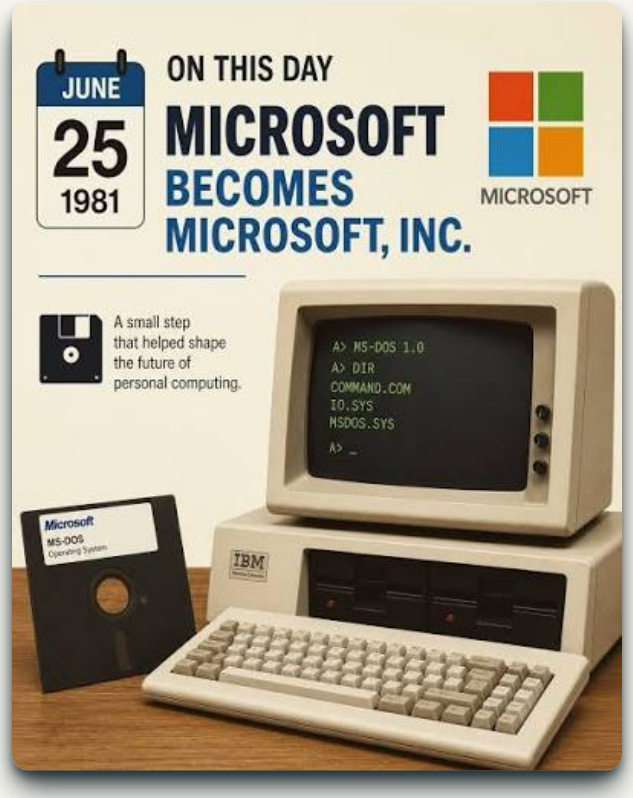

Back to school_

Welcome to history class_

A trip down memory lane

1981_

Before we clicked, we typed ...

JUNE
25
1981
ON THIS DAY
MICROSOFT
BECOMES
MICROSOFT, INC.
MICROSOFT
A small step
that helped shape
the future of
personal computing.
A> MS-DOS 1.0
A> DIR
COMMAND.COM
IO.SYS
MSDOS.SYS
A> _
Microsoft
MS-DOS
IBM

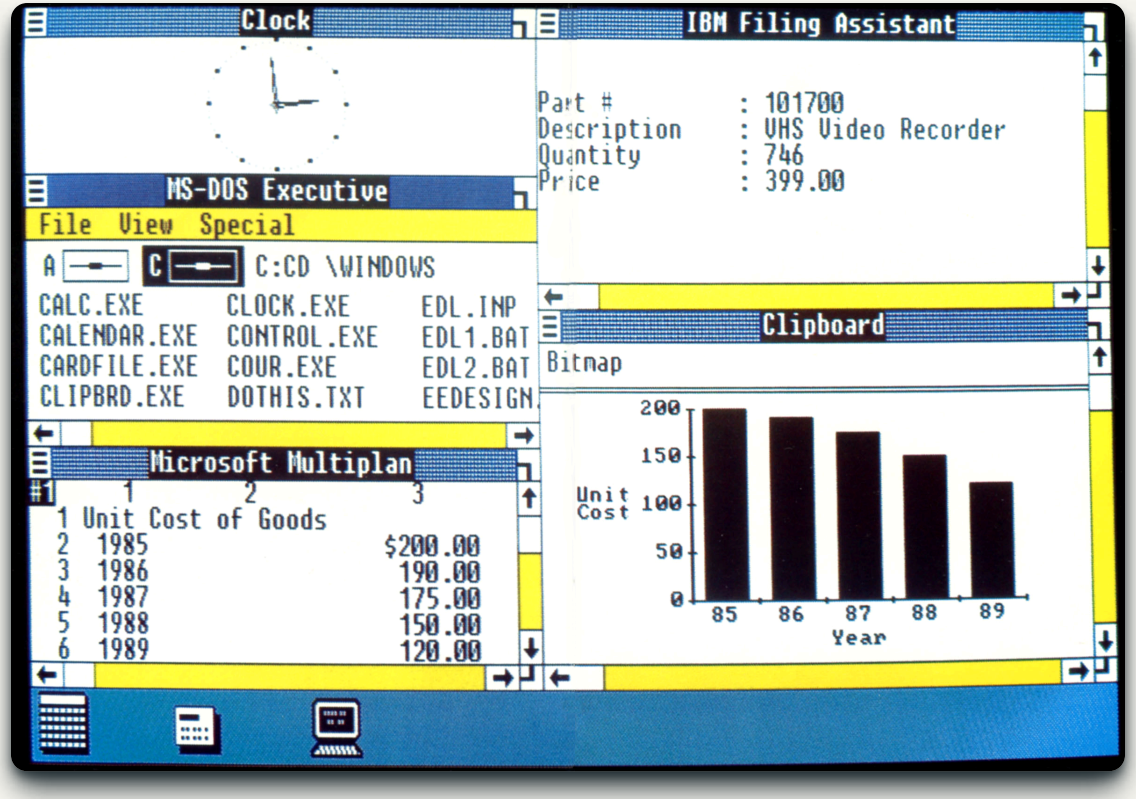

PC DOS - MS DOS

PC DOS - MS DOS

1985_

The command line didn’t disappear. We just put windows on top of it.

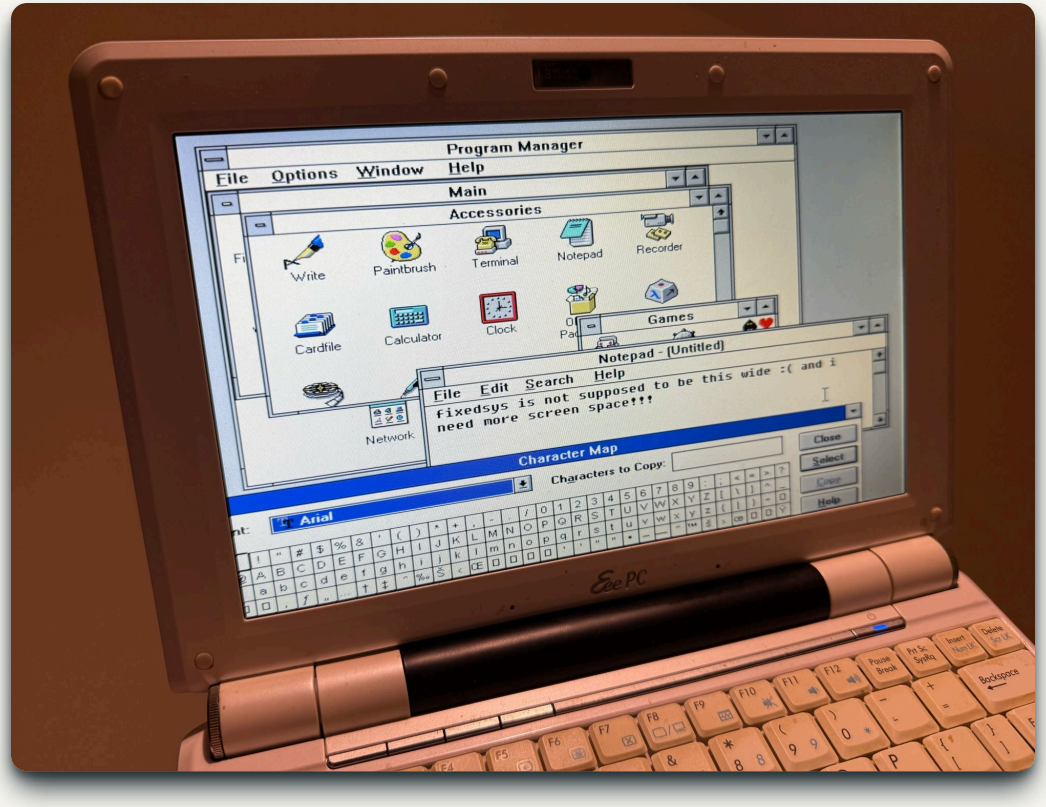

Windows 1.0: the GUI arrives

Windows 1.0: the GUI arrives

1990-1995_

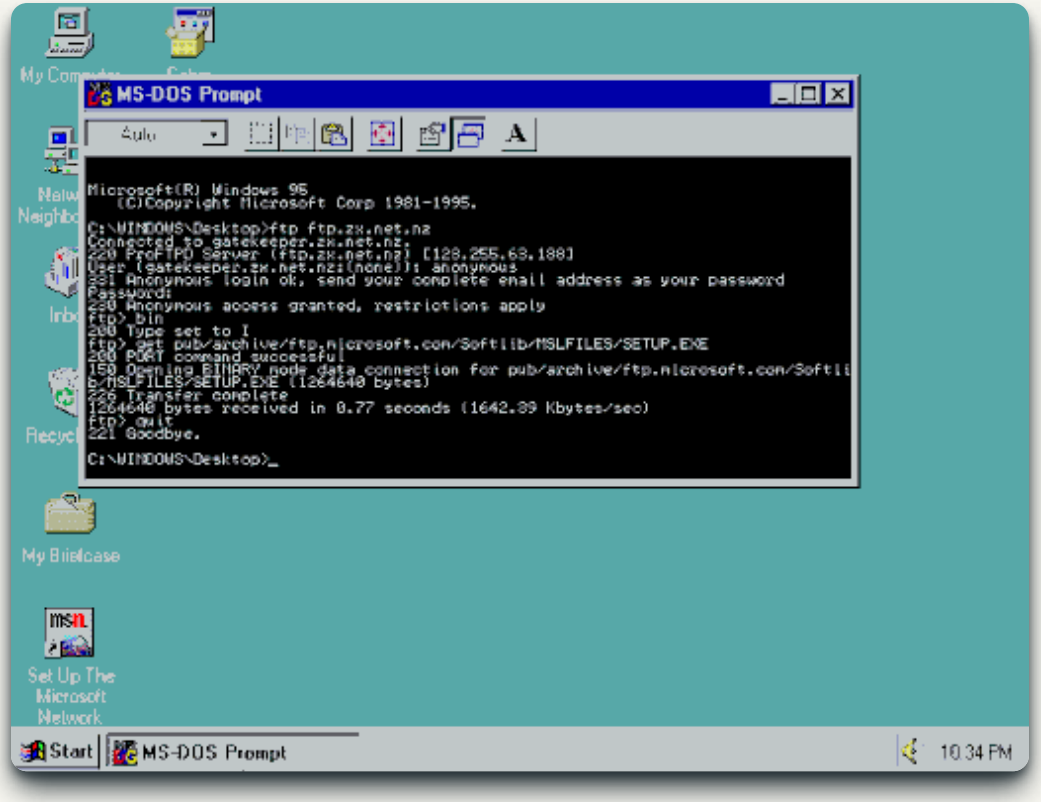

The GUI won the user. The terminal kept the power users.

Windows 3.x → Windows 95: clicking becomes normal

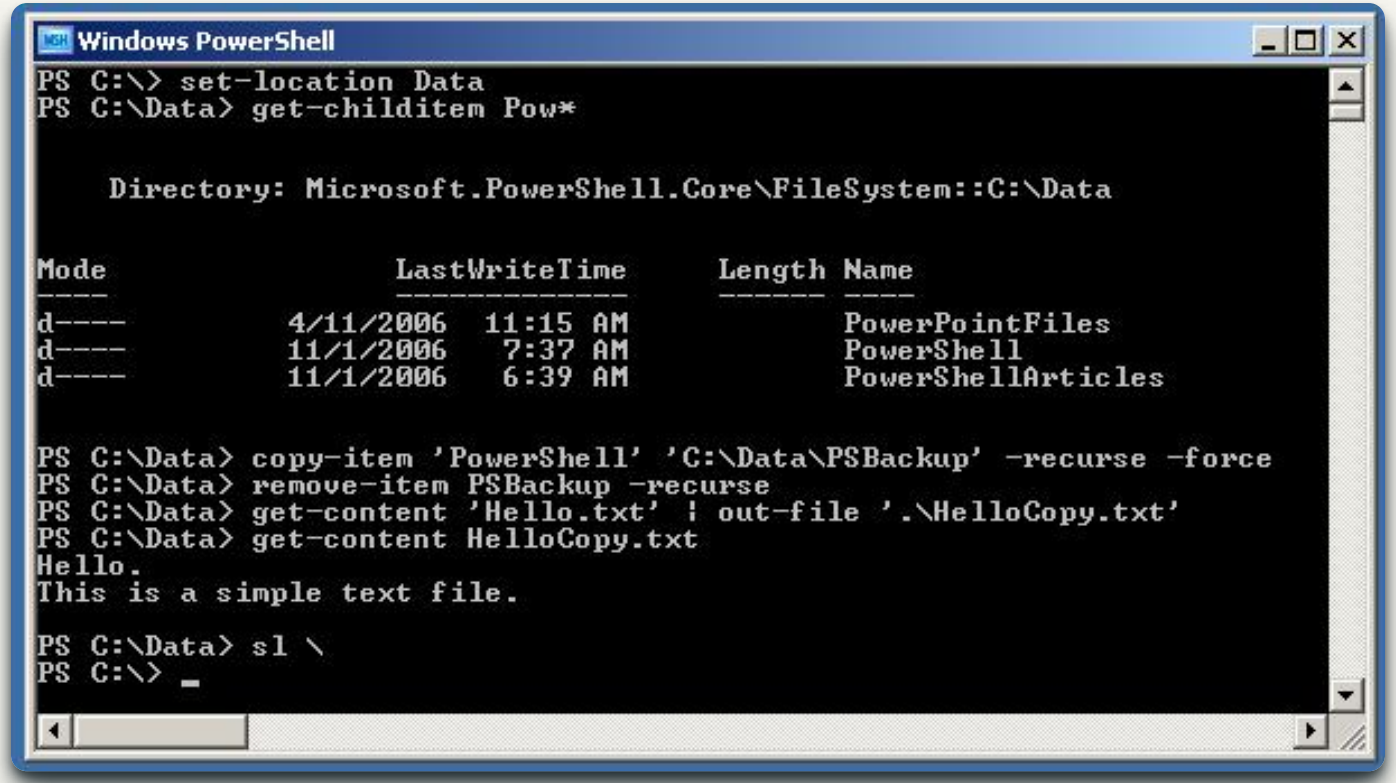

Windows 3.x → Windows 95: clicking becomes normal

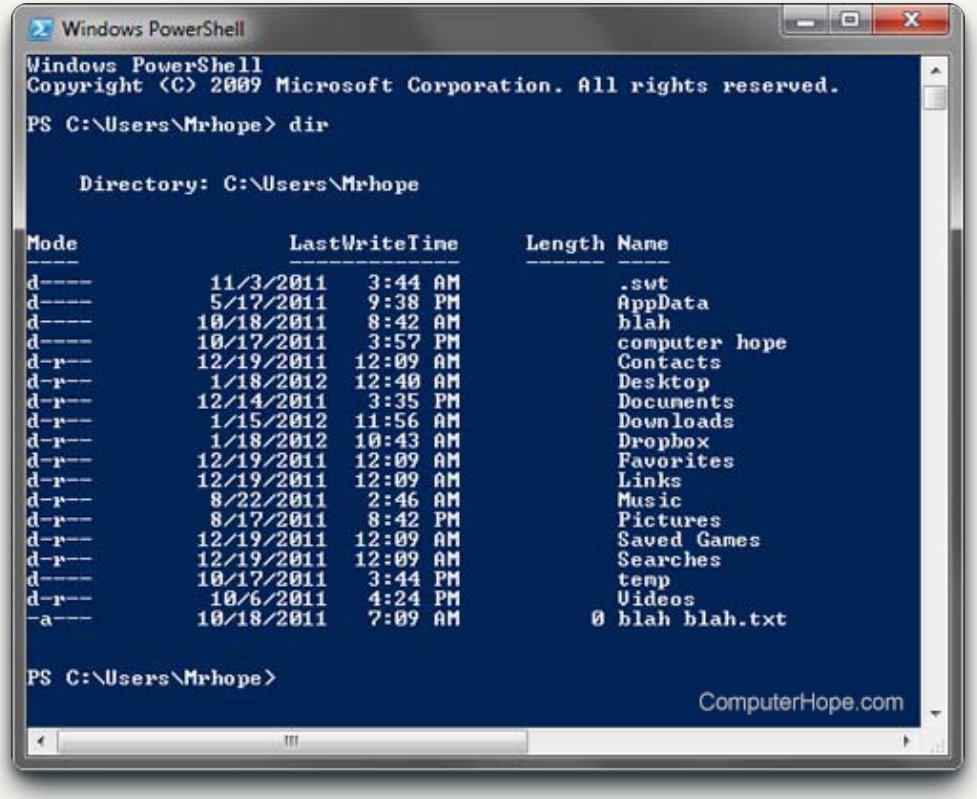

Windows 3.x → Windows 95: clicking becomes normal

2006_

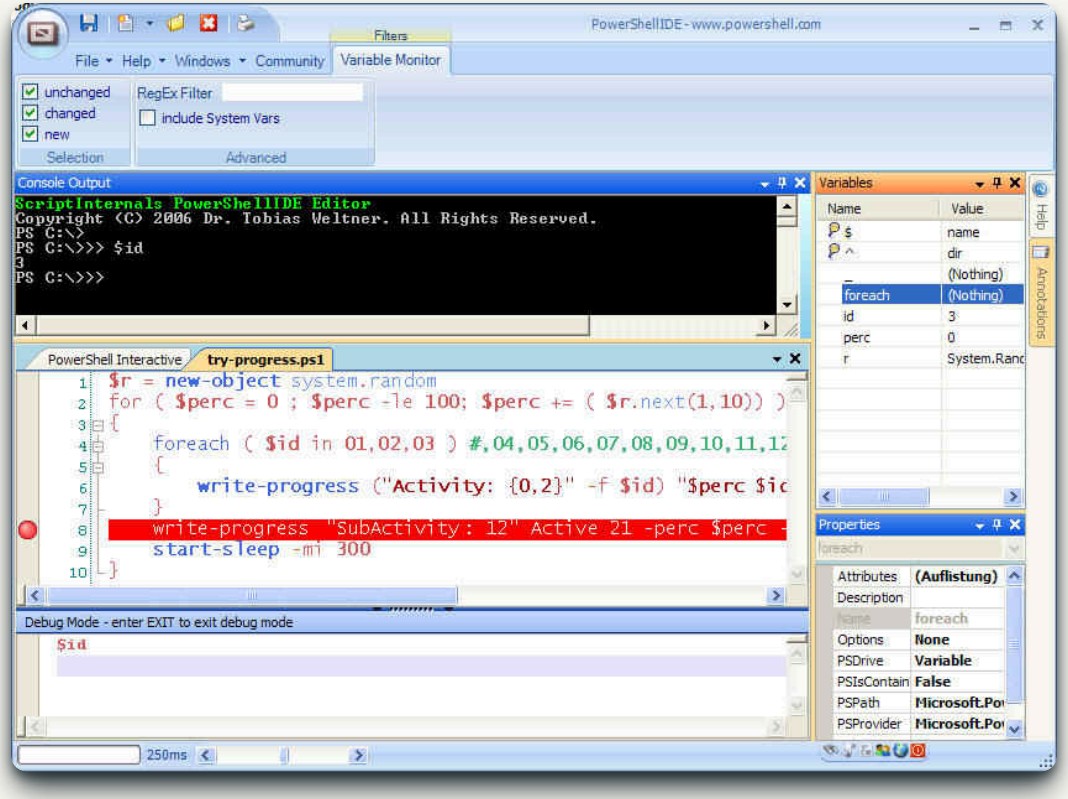

The terminal became an automation platform.

PowerShell: the command line grows up

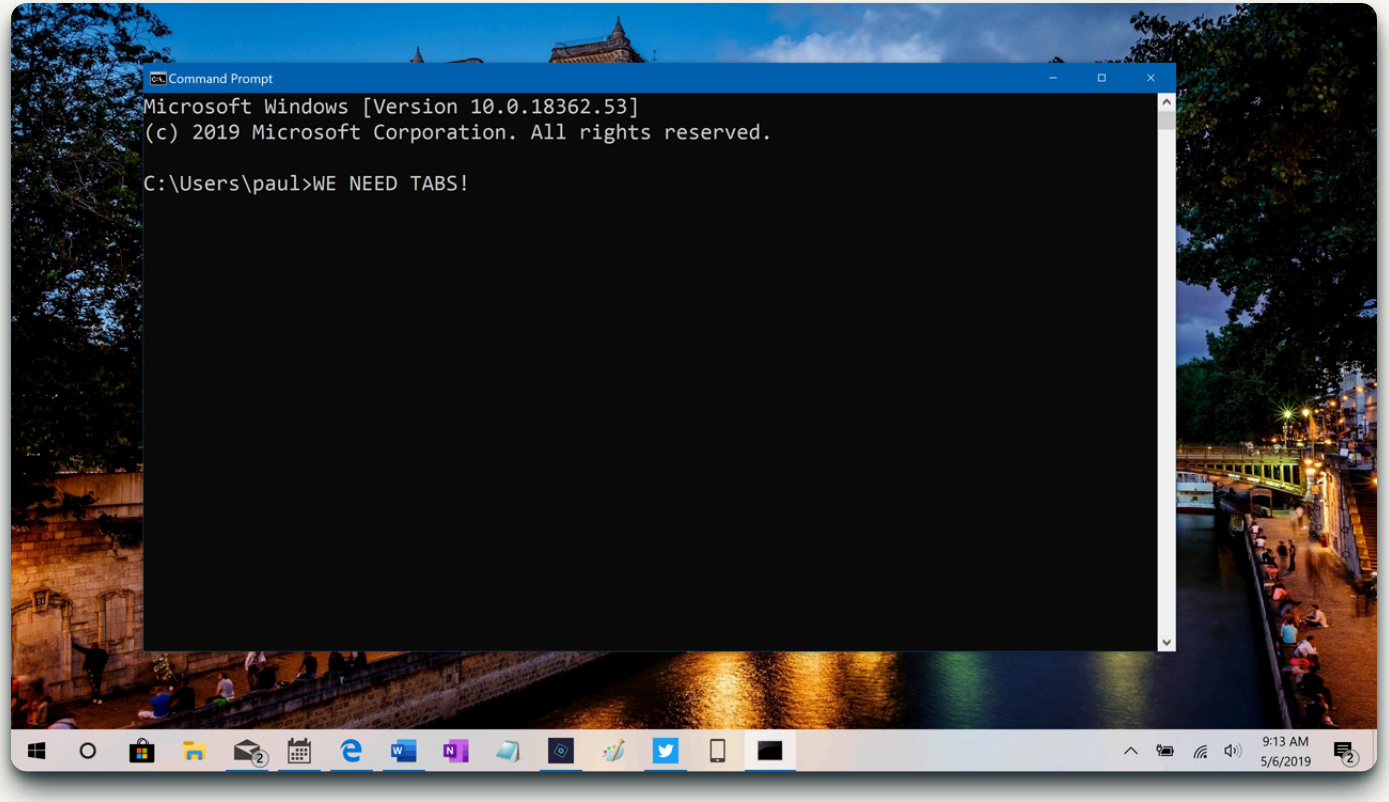

PowerShell: the command line grows up

PowerShell: the command line grows up

2019_

We gave the command line a modern GUI.

Windows Terminal: the terminal gets a GUI

Windows Terminal: the terminal gets a GUI

Today_

AI brings us back to the terminal

"We moved from CLI to GUI to make computers easier for humans. Now AI is bringing us back to the CLI, because it makes computers easier for LLM's."

Why CLI_

CLI is structured and predictable

Everything is scriptable

AI speaks CLI really well

Tools already live in the terminal (Git, GitHub, NPM, PAC CLI etc)

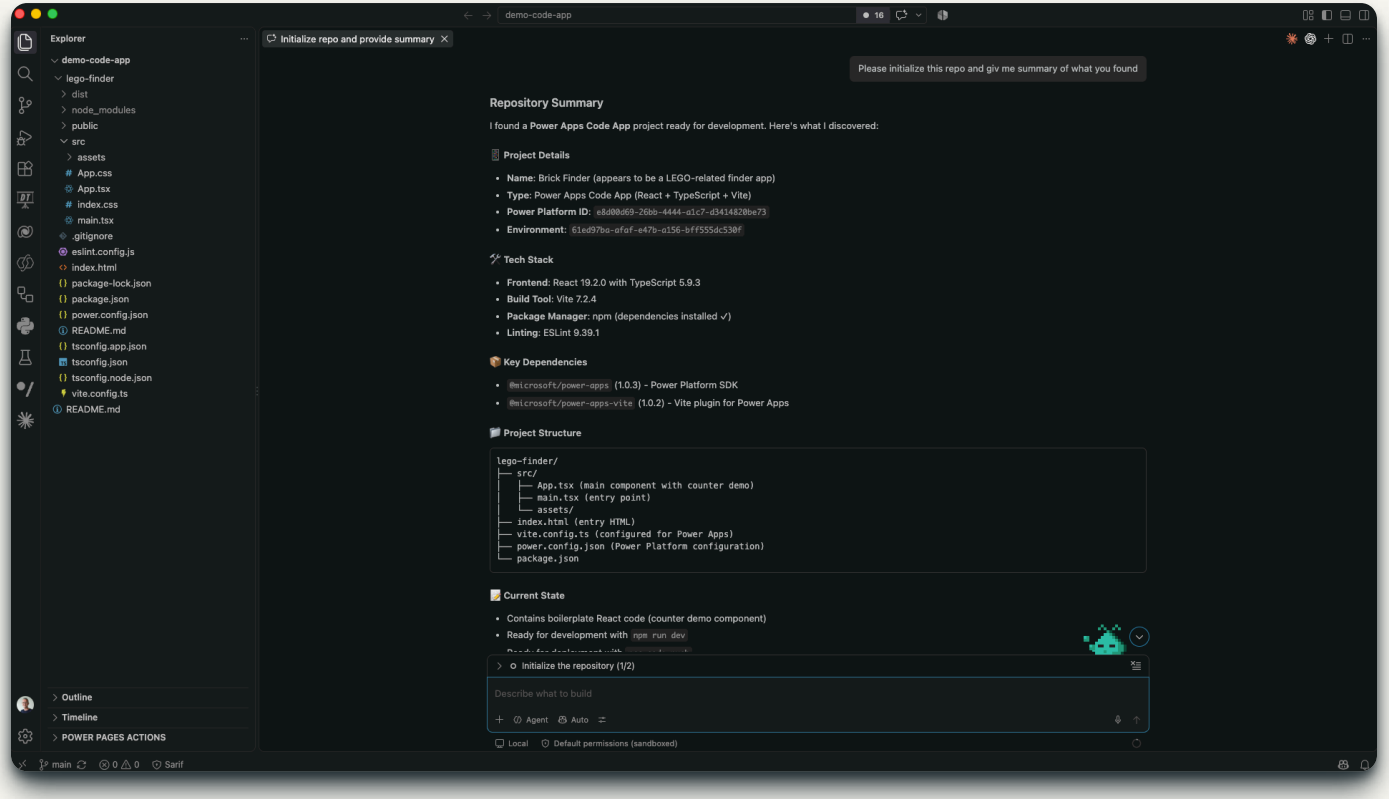

No GUI required

Welcome back
to the terminal_

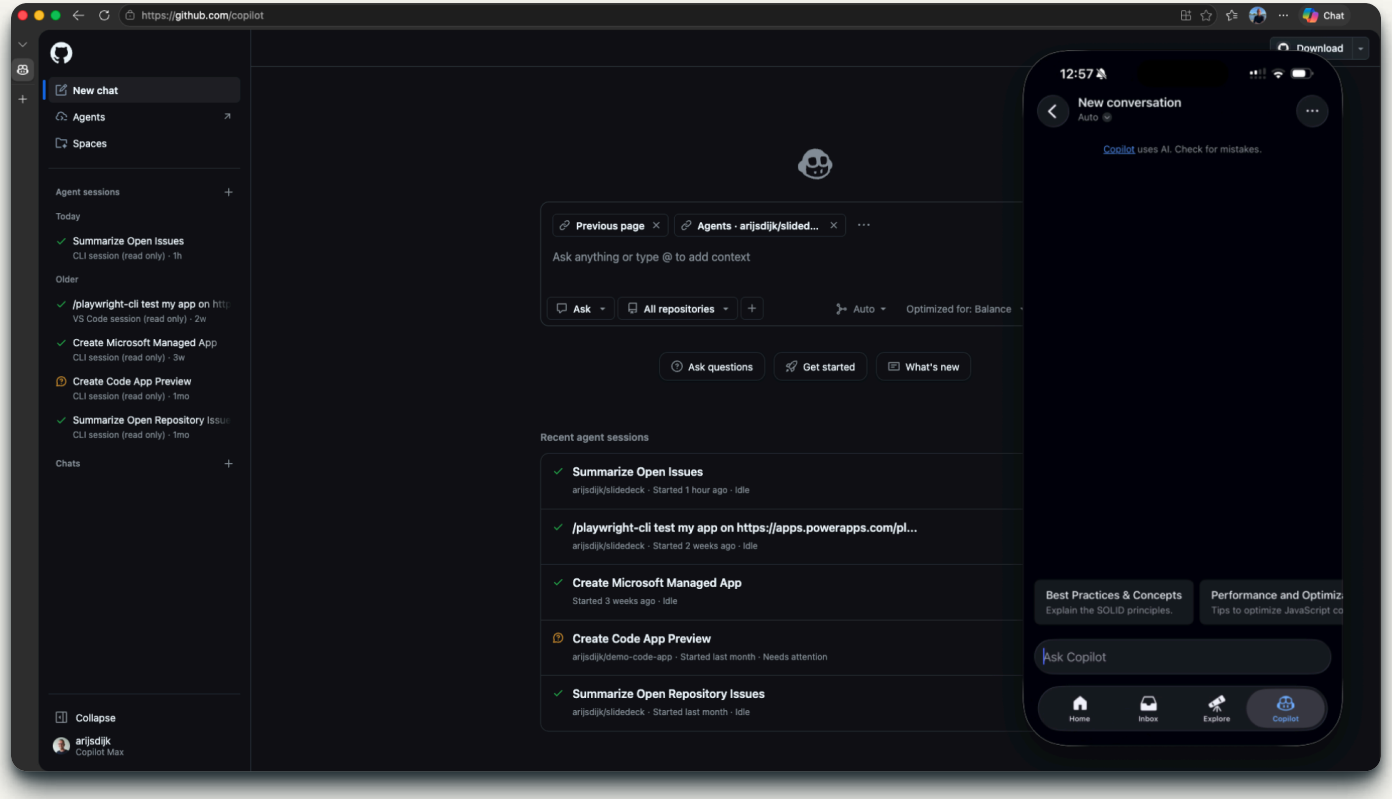

GitHub Copilot_

There are many ways to use GitHub Copilot

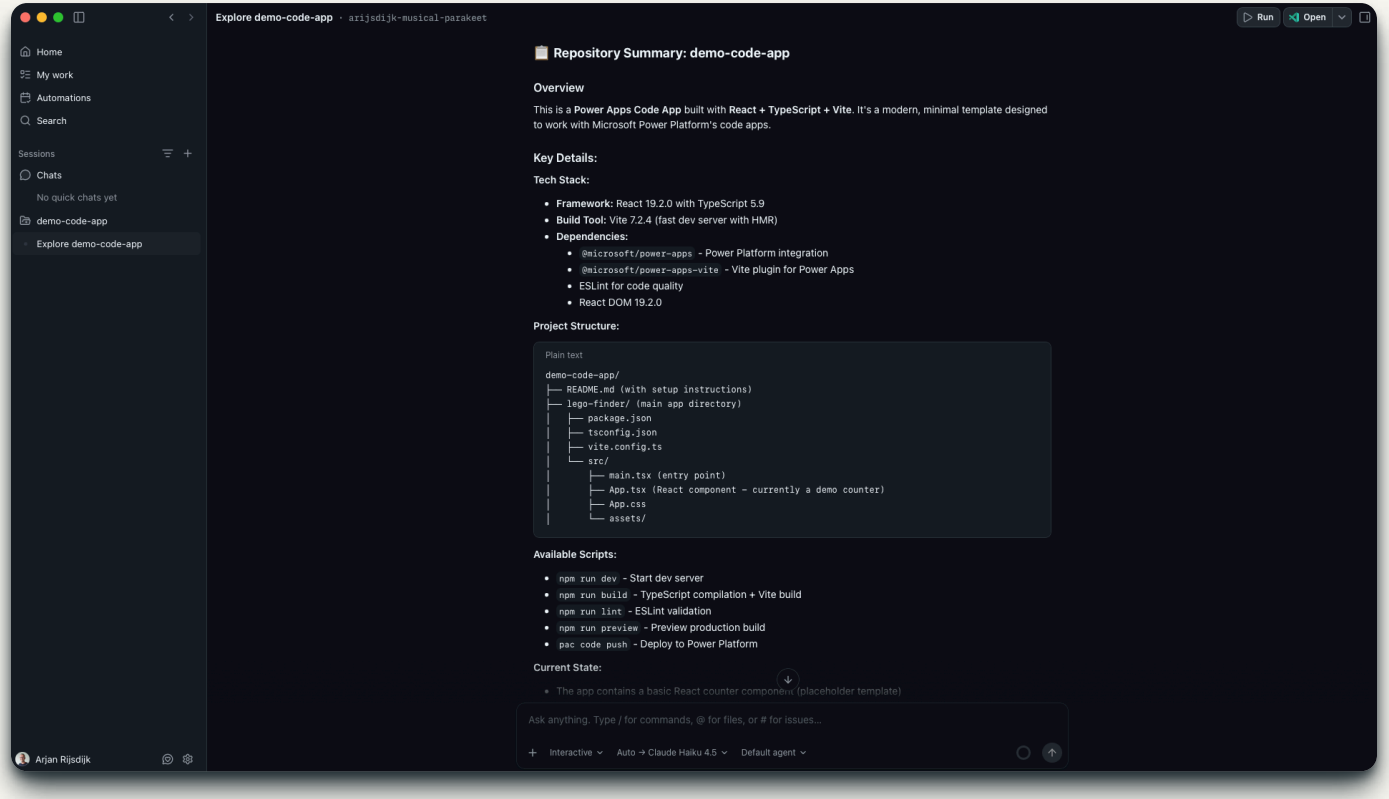

Chat in VSCode_

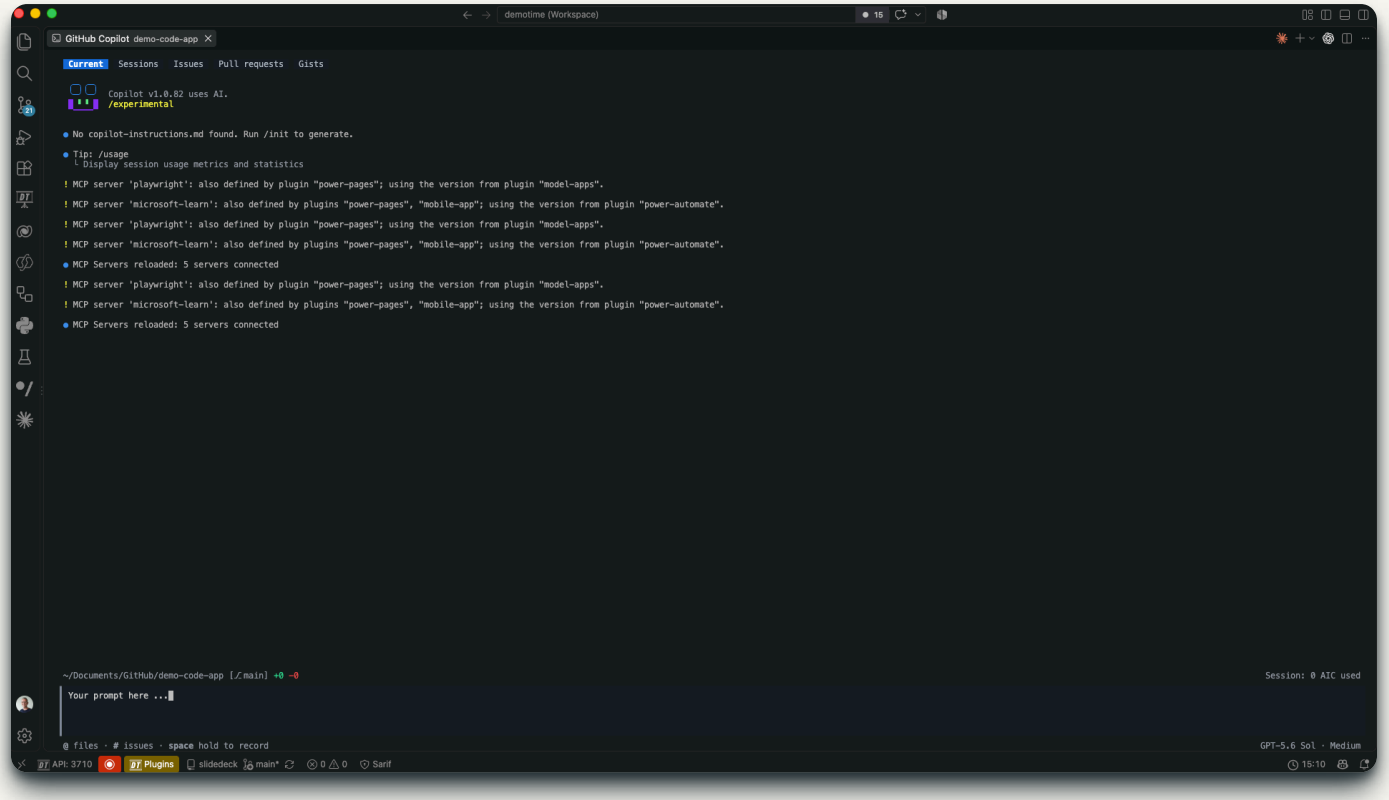

GitHub.com & Mobile app_

GitHub Copilot app_

GitHub Copilot CLI_

All these tools have one thing in common:

GitHub Copilot SDK_

GitHub Copilot CLI_

The GitHub Copilot Command Line Interface

What's GitHub Copilot CLI?_

GitHub Copilot CLI brings AI-powered assistance directly to your terminal.

Getting started_

01. Open your favorite terminal
02. Install GitHub Copilot CLI `npm install -g @github/copilot`
03. Type `copilot` in your terminal
04. Run `/login` to authenticate with GitHub
05. Keep your tokens topped up, even AI hates running out of fuel mid-prompt

Basics_

Start_

Open your terminal and type `copilot`

Start prompting_

~/copilot

Summarize all open issues for this repository

Slash commands_

What are slash commands?_

Short commands that start with `/`

Control Copilot CLI’s behavior

Quickly start common actions

Manage settings and sessions

Type `/help` to see available commands

Version_

Get your GitHub Copilot CLI version

Changelog_

Get the latest changelog

~/copilot

/changelog

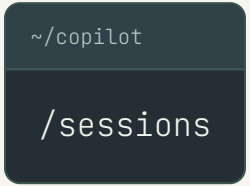

Help_

Show help for all commands

Sessions_

See a list of your sessions

Abandon a session and start fresh

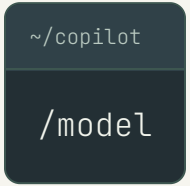

Rename session_

~/copilot

```
/sessions rename Back to the terminal
```

Model selection_

Select a model

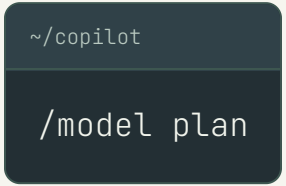

Set model to auto

~/copilot

```
/model auto
```

Select a model for plan mode

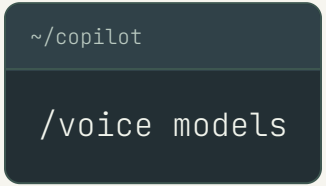

Use your voice_

Turn on voice

Choose your voice model

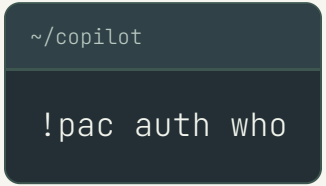

Select your device

~/copilot

/voice devices

Switch to shell_

Run a shell command in the CLI

Plugins_

Plugins make Copilot domain-specific_

Copilot knows the basics. Plugins add expertise.

What's a Plugin_

It is an installable package that gives GitHub Copilot a coherent set of capabilities. It bundles;

Skills, instructions for specific tasks

Agents, specialized AI assistants

MCP configurations, access to external systems and tools

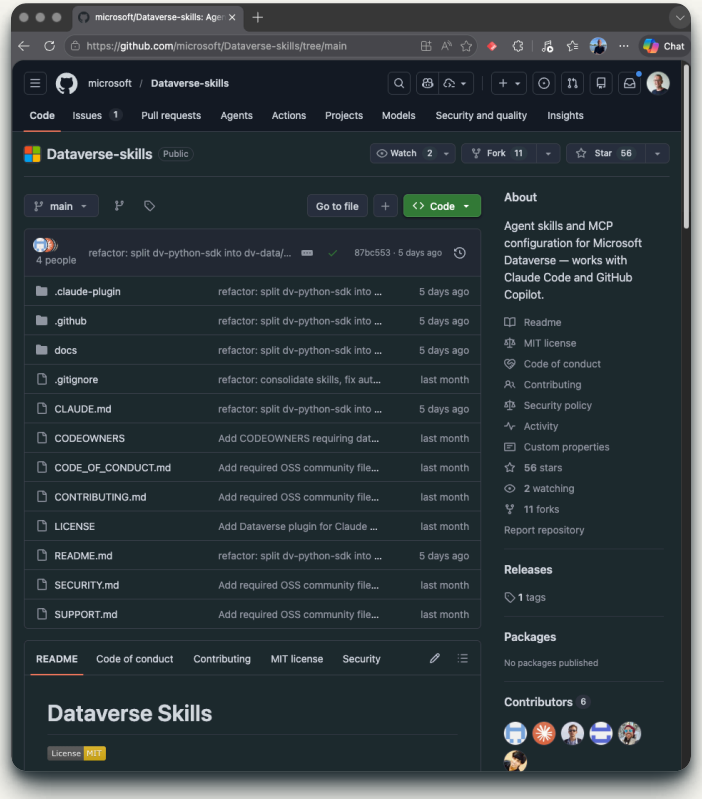

Hooks, automated actions and controls

LSP configurations, additional language support

Plugin examples_

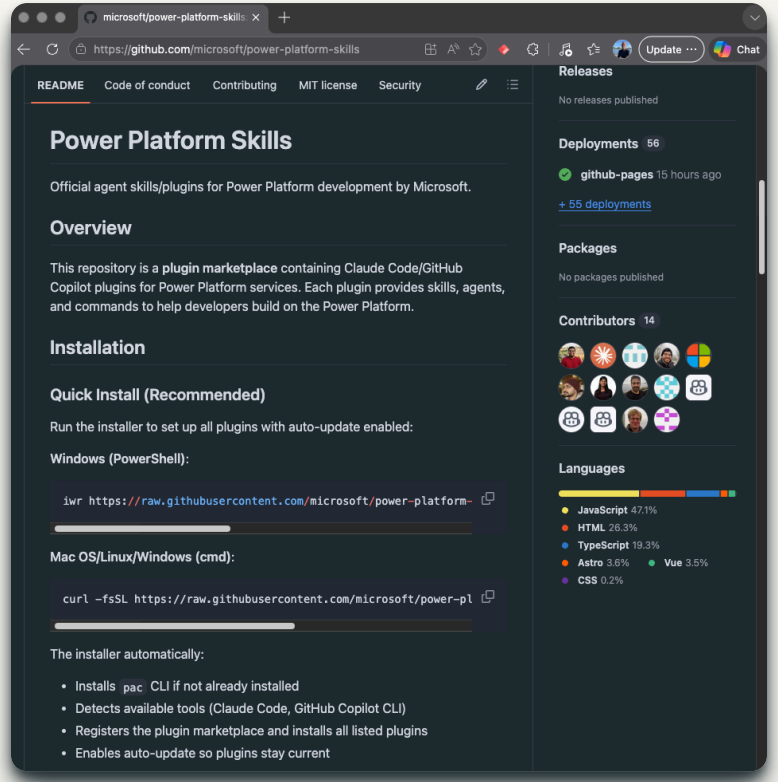

Dataverse skills_

Agent skills and MCP configuration for Microsoft Dataverse. These skills teach AI agents how to build and manage Dataverse solutions using natural language.

Power Platform Skills_

A plugin marketplace containing Claude Code/GitHub Copilot plugins for Power Platform services. Each plugin provides skills, agents, and commands to help developers build on the Power Platform.

Power Platform Skills_

Power Pages

Model apps

MCP apps

Code apps

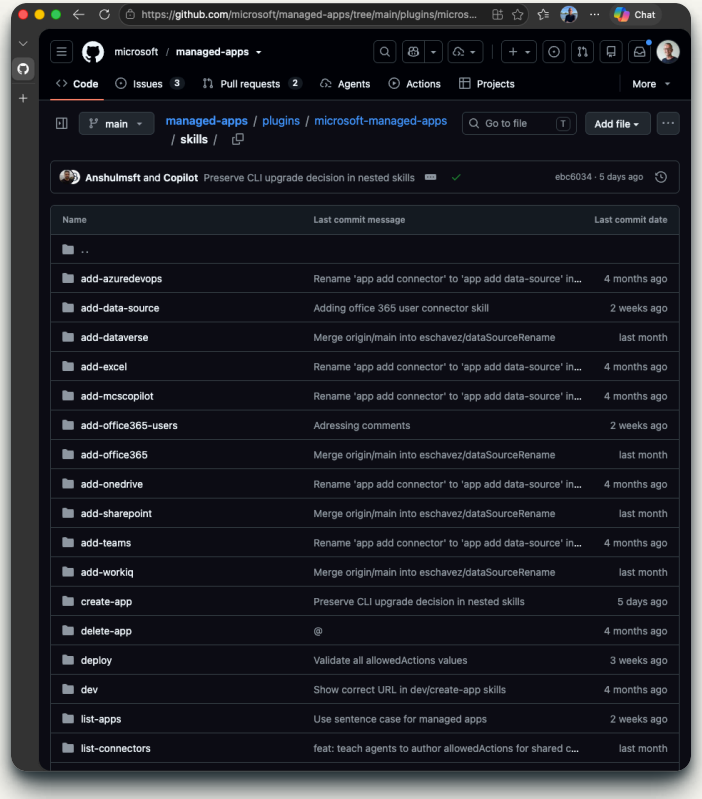

Mobile apps

Canvas apps

Power Automate

Managed Apps_

A plugin marketplace containing Claude Code/GitHub Copilot plugins for Managed App creation on the Copilot Managed Runtime. This is in **Public Preview**.

Get a list of your plugins

Get a list of your skills

Power Platform_

Let's build_

What do we want to build?_

Code app

Power Page website

Model Driven app

Questions_

Thank You_
